Academic Portal for Public Junior High Schools

Generated based on actual source code implementation

ConnectED

System Implementation Analysis

★ 1. Core Features

The following features represent the actual implemented capabilities within the ConnectED system architecture.

User Management

Complete management of student and teacher accounts, including access controls, profile updates, and secure authentication flows.

Academic Management

Configuration of the academic structure, allowing administrators to manage the active School Year, Quarters, and Subjects.

Class & Lesson Management

Teachers can manage their assigned classes, view student rosters, and organize detailed lesson structures.

Learning Materials

A centralized repository for uploading, sharing, and organizing digital class materials for students.

Grade Management

Tools for teachers to record, manage, and calculate student grades across various assessment types.

Communication

Integrated messaging system and global/class-specific announcements to facilitate seamless communication.

AI Teaching Assistant

An integrated Artificial Intelligence tool designed to assist teachers in generating quizzes and content.

Reports & Analytics

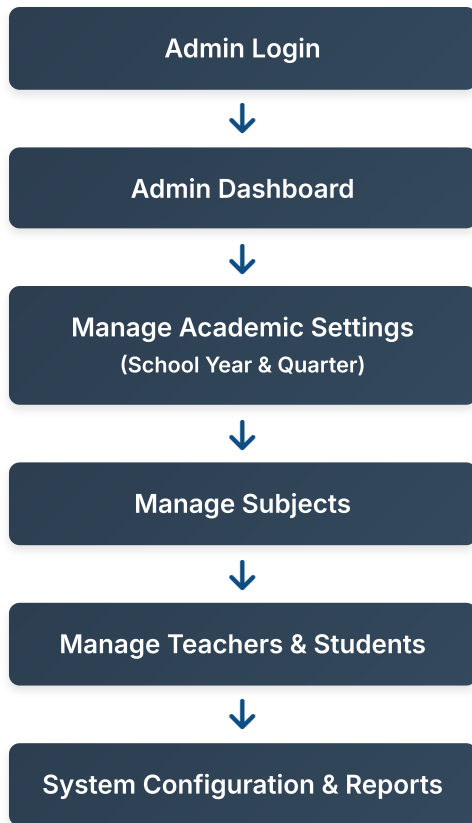

Dashboard statistics and reporting tools providing insights into system usage and academic metrics.
